Experiment -1

Aim: Design an E-R diagram for an Indian e-commerce platform with entities Customer, Product, Order, Order item, Seller, category, Payment, Delivery, Address. Specify primary keys, composite and multi-valued attributes, weak entities, specialization of product, and participation constraint

Objective: To identify entities involved in e-commerce system.
To identify attributes and primary key of each entity
To establish relationship between entities

Entities

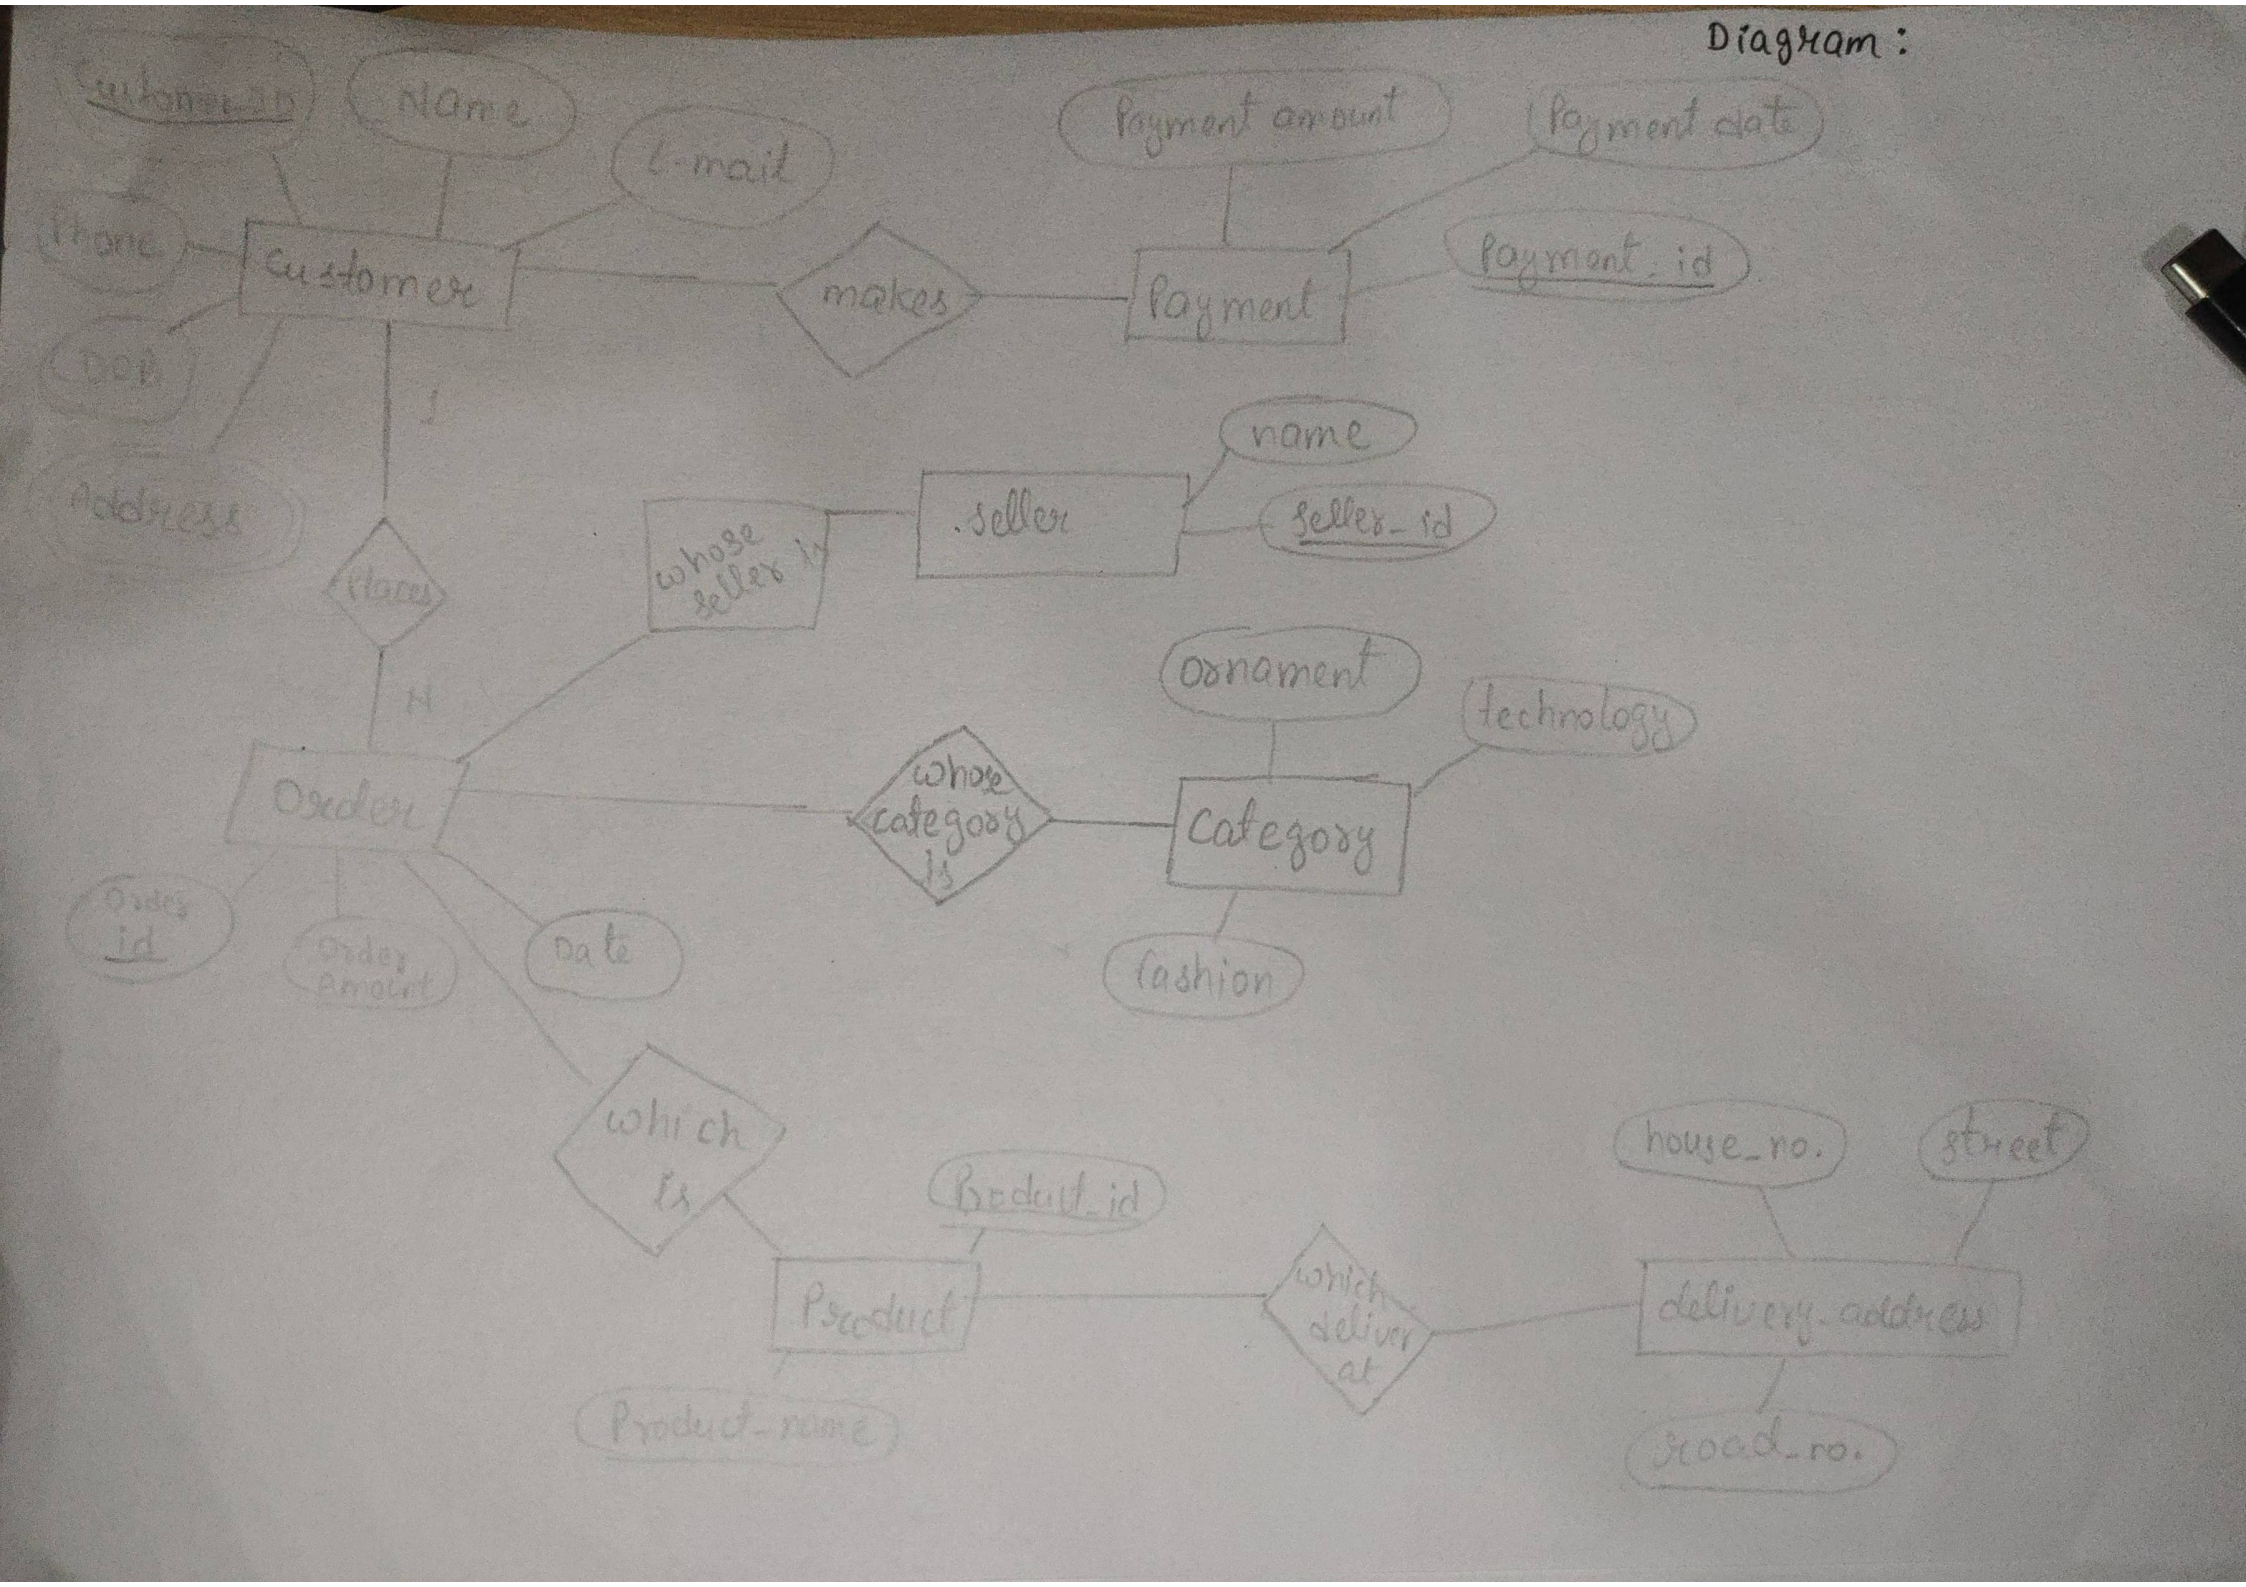

- Customer
- Seller
- Product
- Category
- Order
- Order item
- Payment
- Address

Cardinality

Customer → Order = 1:N
Order → Order_Item = 1:N
Category → Product = 1:N
Customer → Address = 1:N
Payment → Order = 1:N
Address → Order = 1:N
Seller → Product = 1:N

Result:
The E-R diagram for the Indian E-commerce platform was successfully designed by identifying required entities, attributes, relationships, and cardinalities.
